The ILC team wants to share a recent webinar from Instructure's VP of Global Academic Strategy, Ryan Lufkin, that offers an insightful conversation about artificial intelligence literacy in Higher Education.

Instructure has found that educators are cautiously optimistic about the impact of generative AI on education, however they are hungry for insights into how to navigate the world of AI. This webinar discusses strategies that are being adopted to ensure the implementation of AI is safe, ethical, accessible, equitable, and impactful for teaching and learning in higher education.
